

Study exciting new angles on Kawneer AA®100 Curtain Walling at Plymouth University

Architects: Henning Larsen, BDP
Contractor: HBG

Kawneer's AA®100 curtain walling system offers unique adaptability to exciting designs. Fully exploited by world-renowned architectural practice Henning Larsen to create the iconic Roland Levinsky Arts Building at Plymouth University.

Its striking contours demanded a façade system incorporating a variety of custom-made, precision-engineered aluminium sections and angled facets. No problem with AA®100.

AA®100 is a unique, CWCT-accredited, predominantly dry jointed system. Minimal on-site sealants are required, reducing installation time and providing excellent weather resistance.

All this and sustainability too, from a global company with unrivalled expertise in architectural aluminium glazing systems. For more angles on innovative curtain walling, contact Kawneer today.
