Features

- 350 Heavy Wall™ IR medium stile has 3-1/2" (88.9) vertical stiles, 3-1/2" (88.9) top and 6-1/2" (165.1) bottom rails
- 500 Heavy Wall™ IR wide stile has 5" (127) vertical stile, 5" (127) top and 6-1/2" (165.1) bottom rail.
- Door is 2" (50.8) deep
- Door has 3/16" (4.8) wall thickness
- Dual moment welded corner construction
- Single acting
- Square stops with interior silicone seal for 9/16" (14.3) or 1" (25.4) glazing infills
- Offset pivots, butt hinges or continuous geared hinge
- MS locks and 3-point locks or exit device hardware
- Surface mounted or concealed closers
- Architects Classic push/pulls
- Adjustable astragal utilizing pile weathering with polymeric fin at meeting stiles
- Polymeric bulb weatherstripping in door frames
- Permanodic™ anodized finishes in seven choices
- Painted finishes in standard and custom choices

Optional Features

- 3/16" (4.8) heavy wall frame
- Paneline™ / Paneline™ MEL exit device (Hurricane Resistant applications only)
- Square stops with 3M® VHB interior tape for 9/16" (14.3) or 1" (25.4) glazing infill
- Crossrails and 10" (25.4) bottom rail

Product Applications

- 350/500 Heavy Wall™ IR wide stile provides extra strength for schools, institutions, office buildings and other high traffic applications where codes require wind borne debris protection or blast mitigation protection

For specific product applications, consult your Kawneer representative.
Laws and building and safety codes governing the design and use of glazed entrance, window, and curtain wall products vary widely. Kawneer does not control product configurations, operating hardware, or glazing materials, and assumes no responsibility therefor.

Kawneer reserves the right to change configuration without prior notice when deemed necessary for product improvement.

---

DUAL MOMENT WELDED CORNER CONSTRUCTION

#1 MECHANICAL FASTENING is accomplished by attaching a 5/16” (7.9) thick extruded aluminum channel clip to the vertical stile with 1/4”-20 heat strengthened bolts and 3/16” thick steel nut plates for a high strength welding base for attachment horizontal member.

#2 SIGMA* DEEP PENETRATION PLUG WELDS are made top and bottom after the horizontal is properly positioned over the channel clip to help provide the strongest door corner joint currently available.

#3 SIGMA* FILLET WELDS along both top and bottom webs of the rail extrusion complete the welded corner construction.

* An arc welding process known as Shielded Inert Gas Metal Arc (SIGMA) or also known as Metal Inert Gas (MIG).
Laws and building and safety codes governing the design and use of glazed entrance, window, and curtain wall products vary widely. Kawneer does not control the selection of product configurations, operating hardware, or glazing materials, and assumes no responsibility therefor.

PANELINE™ EXIT DEVICE

The Paneline™ concealed rod exit device will accommodate variations in door width as shown in the following illustrations.

The Optional Paneline™ MEL device is designed for electrified access control and is compatible with most key pad and card reader systems.

See Hardware Section for complete description of Paneline hardware, including finish of units.

Paneline™ uses mortise cylinder in lieu of the normal rim-type.
