Kawneer Redefines Thermal Technology: Introducing Insulpour™ Thermal Entrances with IsoPour™ Thermal Break Technology

Innovative New Technology Delivers Exceptional Performance and Increased Design Flexibility

NORCROSS, Georgia – Kawneer Company, Inc., the leading manufacturer of architectural aluminum products and systems for commercial construction, redefines thermal technology with the introduction of its new Insulpour™ Thermal Entrances featuring the advanced IsoPour™ Thermal Break Technology. Ideal for high-end commercial and multifamily facilities, Insulpour™ Thermal Entrances offer high thermal performance, strength, and interior and exterior dual finish options for increased design flexibility.

Redefining Thermal Technology

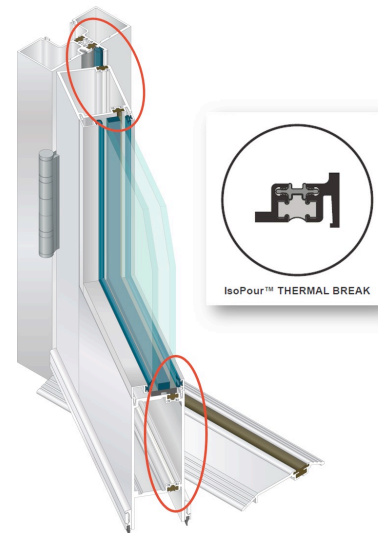

Kawneer's new IsoPour™ Thermal Break Technology merges the industry-proven pour and debridge thermal break with polymer isolator technologies. Both the door and the frame employ the advanced IsoPour™ Thermal Break Technology to create assemblies with higher structural performance, enhanced energy efficiency and greater design flexibility.

Design Flexibility

With sightlines that match non-thermal doors, the entrance is available in 250T narrow, 350T medium, and 500T wide stile options. The unique thermal break design allows for a wider selection of locking hardware than previous thermal entrance designs. Additionally, multiple cross-rail sizes and bottom rail heights are available, giving architects, designers, and building owners more opportunities to bring their vision to life.

Insulpour™ Thermal Entrances featuring IsoPour™ Thermal Break Technology have undergone shock tube testing for blast mitigation and meet ASTM E1996 hurricane impact resistant requirements up to Zone 4 and Level D.

To learn more about the new IsoPour™ Thermal Break Technology featured in Insulpour™ Thermally Broken Entrance, visit Kawneer.com.

About Kawneer

For more than a century, Kawneer has led the façade industry with innovative, high performing building envelope solutions. Headquartered in Norcross, GA, with locations across North America and Europe, Kawneer manufactures a broad range of architectural aluminum systems from curtain walls and entrances to framings systems and windows. Kawneer's technical expertise and product capability enhance building performance, protection and productivity to deliver inspiring buildings around the world. Part of Arconic Inc.'s global Building and Construction Systems business unit, Kawneer innovation is advancing building and architectural design.
